

Welcome to PDF Studio

Edit your PDFs live in the browser · non-destructively.

This is a sample document so you can try the editor right away.

Things to try:

- Add text, highlights and shapes on the Edit screen (overlay layer).
- Reorder, rotate, split or merge pages from Organize.
- Ask the AI assistant to summarize or translate this page.
- Export the document to Word and compare the layout.

Your original upload is never modified. Every edit is stored as a structured overlay and baked onto a copy on demand, saved as a new version.
